## Electrocardiogram Interpretation Course

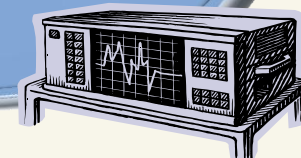

This is a half day theoretical and hands-on workshop teaches nurses in identification in common arrhythmias, significance and treatment. Nurses will learn to accurately interpret rhythm strips and multiple lead tracings using static and dynamic simulation. This workshop is a comprehensive course that will reinforce your existing skills and then develop new knowledge so that you will take your ECG interpretation to a higher level.

### Electrocardiogram Interpretation includes:

- i) Rhythm analysis
- ii) Common atrial
- iii) Ventricular rhythms
- iv) Blocks
- v) Hypertrophy
- vi) Axis deviation
- vii) Ischemia
- viii) Myocardial infarction
