

Research Field: PLANETARY DYNAMO

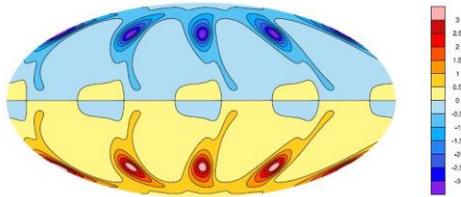

Focused Field: PARALLEL DYNAMO SIMULATIONS

SHORT BIO

Following a Bachelor degree in Energy Power System at Wuhan University in 2011, I entered University of Chinese Academy of Sciences (Beijing) to start a successive master-doctor program and obtained my PhD degree in Fluid dynamics in 2018.

After a two-month visiting job at Shanghai Astronomical Observatory, Chinese Academy of Sciences Center for Astro-Geodynamics, I accepted a post-doctoral position at the State Key Laboratory of Lunar and Planetary Sciences, Macau University of Science and Technology (2018 to date).

My research field involves computational fluid dynamics, high-performance scientific computing and planetary dynamo simulations.

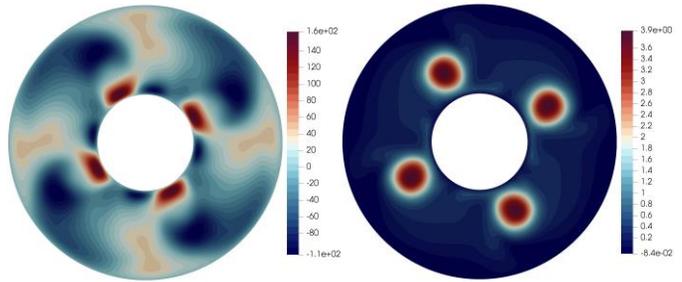

Post-doctor

Liang Yin

PhD: FLUID DYNAMICS – University of Chinese Academy of Sciences, Beijing (UCAS)

B.E: ENERGY POWER SYSTEM – Wuhan University, Wuhan

Equatorial slices – Yin et al., 2021
