Department: Faculty of Information Technology

Course Name   Object-Oriented Programming

Hours per week   6

Number of Credits   6

Course Description   The course uses C++ as the teaching language to introduce the main idea, basic concepts, elements, and terminologies of object-oriented technology, as well as some pragmatic programming techniques useful in object-oriented programming. After taking this course, the students should have a general understanding about object-oriented program design, and be familiar with C++ programming.
